

The Offshore Accountants Report

The Offshore Report

The Offshore Accountants Report

What every businessperson should know

There comes a time in your life when you may start to question why you are giving back almost half of your salary to your Government, every month. You are working extremely hard and paying your taxes like a model citizen but lately you have been thinking, " what is the Government is doing with this money ?..... and when I retire will I still have to continue paying near 50% taxes, wherever I live?"....."why cant I outsource some of my operations to a lower taxed country?"

Like

all of us, you would like more money in your pocket and have heard about offshore financial centres (OFC's) but you have been advised by your accountant to avoid them at all costs, especially after the Enron and Parmalat scandals.

However, our Offshore Report will show you how 100,000's of legitimate businesses use OFC's and how they along with movie stars and large corporations pay relatively little in taxes every year on their international operations. We will show you that you and your business can do the same, legally and cost effectively.

The Offshore Report

explains how OFC's started and why they still survive today. We name many international companies that paid little or zero taxes during the past 5 years. We go into detail about how many of the top Fortune 500 companies in the USA used accounting anomalies to pay no Corporation Tax at all.

We give examples of real companies that are trading now from OFC's and how they have saved, legally, \$100,000's every year.
